Product Information Sheet

Código: C185

CultureJar™ PT-12™, Polycarbonate, 11 oz (329 mL)

The PT-12 CultureJar is a tall, square, polycarbonate plant tissue culture vessel that is fully compatible with our PhytoCap CultureJar closures (sold separately). PTL-12 is also graduated with 25 mL and 50 mL graduations on one side so you have a guide for how much media you are pouring into your vessel. PTL-12's are molded from autoclavable high clarity polycarbonate plastic which allows for lightweight transportation of your cultures, excellent light transmission, and high durability (virtually unbreakable).

AUTOCLAVE NOTES: While this product is autoclavable, it is susceptible to blemishes/white spots after each cycle. We recommend wrapping the vessels in foil prior to autoclaving as this prolongs the clarity. We do not recommend using bleach with this product.

Autoclavability	**Up to 121 °C (see notes in description)**
Graduations	**25 mL and 50 mL**
Use With	**C070 PhytoCap (sold separately)**
Volume	**329 mL**
